Specialist Finance & Digitalization

Would you like to actively shape and optimize financial processes? Are you enthusiastic about new tools and would you like to drive forward the digitalization of our Finance department? Then you've come to the right place! To strengthen our motivated team, we are looking for a Finance Specialist – Finance & Digitalization (f/m/d) who will make our financial processes fit for the future.

Who we are

J. Willers Engineering AG is an established Swiss family business that combines tradition and innovation. Founded in 1989, our roots lie in building technology, but today we think ahead: with our expertise in technically demanding construction projects in the fields of **Life Sciences, Healthcare, Workspace, Energy Hub, and Data Center**, we are operating successfully and are offering planning services of the highest standard.

With over 110 employees at five locations (Rheinfelden, Bern, Zurich, Freiburg im Breisgau and Wrocław), we think across generations – in our solutions and in our relationships.

Your role

In this varied role, you will take on responsibility in two main areas:

- **Finance & Controlling:** You will provide support in traditional finance areas such as financial statements, budgeting and forecasting processes, and the analysis of financial data. You will prepare meaningful reports for the management team.

- **Digitalization & Process Optimization:** You will actively drive the digitalization of our financial processes. You will develop modern workflows, automate booking processes and ensure efficient finance and data structures. As the central interface between finance, IT and business, you will be responsible for projects from requirements gathering to successful implementation.

What you bring to the table

- **Education:** Completed training/bachelor's degree in finance or business administration. Further training or initial experience in project management is an advantage.
- **Experience:** You have two to five years of experience in a similar role, with a focus on finance, controlling or accounting. You are well versed in ERP systems. You already have some experience with Power BI or other business intelligence tools.
- **Personality:** You are an open and communicative person with a high affinity for digital tools, automation, and process optimization. You are analytically strong, proactive, and work in a structured manner. You enjoy introducing modern technologies in a financial context and are able to inspire others to do the same.
- **Languages:** Very good written and spoken English and German (C1/C2)

What we offer

- **Flexible working:** With us, you work independently. Today in your home office, tomorrow at a customer's site, the day after tomorrow in the office.
- **Further training:** Learning is a lifelong process. With us, you will learn through challenging projects, interdisciplinary knowledge sharing, and tailor-made internal and renowned external training courses.
- **Modern working environment:** Our offices are great places to work together as a team to develop innovations.
- **Familiness:** We have a cool team spirit characterized by openness, helpfulness, and humor.

Are you ready for a new adventure?

Then join our team! We look forward to getting to know you and shaping the future together.
